Standardised nomenclature of Flow Adjusting Valves

Beginning **2025** the Flow Adjusting Valves will be **added to the DUNGS product program**. Within this we decided to rework the nomenclature of the Flow Adjusting Valves. The aim of this **new nomenclature** is a simplification of the designation.

The products will not undergo any technical changes, only the designation will be changed. The order numbers for the Flow Adjusting Valves won't change either. The old designations, valid until 2024-12-31, and the new designations, valid from 2025-01-01, are shown in the table below.

Order no.	Old designation (til 2024-12-31)	New designation (from 2025-01-01)

274365	MEH 984.1-1 1/4"-GEH-DUN	FAV 5012 IE
274366	MEH 984.1-1 1/2"-GEH-DUN	FAV 5015 IE
274367	MEH 984.1-2"-GEH-DUN	FAV 5020 IE

We are now aligned to our standard nomenclature by using pressure and nominal size. Additionally we are adding what kind of thread is used (internal or external). This results in the following **type code for the Flow Adjusting Valves from 2025**:

Due to different stock levels, **there may be different designations for** the Flow Adjusting Valves at the beginning of **the transition period**. DUNGS will deliver the products with the previous designation until the stock is used. As soon as the stocks are empty and newly produced items are delivered, these will contain the updated designation. Regardless of whether the old or new designation is on the product, the products are identical.

The Flow Adjusting Valves – including a data sheet – will be added to the website within Q1/2025.
